

Insect conservation: past, present and prospects

Tim R. New, editor

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20417515&lokasi=lokal>

Abstrak

Annotation the history of interest and practice in insect conservation is summarised and traced through contributions from many of the leaders in the discipline, to provide the first broad global account of how insects have become incorporated into considerations of conservation. The essays collectively cover the genesis and development of insect conservation, emphasising its strong foundation within the northern temperate regions and the contrasts with much of the rest of the world. Major present-day scenarios are discussed, together with possible developments and priorities in insect conservation for the future.
