Abstrak

The Cambridge Workshops on Universal Access and Assistive Technology (CWUAAT) are a series of workshops held at a Cambridge University College every two years. The workshop theme: "Designing inclusion for real-world applications" refers to the emerging potential and relevance of the latest generations of inclusive design thinking, tools, techniques, and data, to mainstream project applications such as healthcare and the design of working environments. Inclusive Design research involves developing tools and guidance enabling product designers to design for the widest possible population, for a given range of capabilities. There are five main themes, designing for the real-world, measuring demand and capabilities, designing cognitive interaction with emerging technologies, design for inclusion, and designing inclusive architecture.
