**ABSTRAK**  
Tingginya angka kematian ibu saat ini salah satunya disebabkan oleh adanya komplikasi pada saat kehamilan dan persalinan. Ners spesialis keperawatan maternitas mempunyai peran penting dalam mencegah kematian baik ibu maupun janin. Laporan ini bertujuan untuk memberikan gambaran pelaksanaan praktik ners spesialis keperawatan maternitas meliputi asuhan keperawatan pada masa prenatal, intranatal, postnatal, dan bayi baru lahir normal dan berisiko, serta mengenai masalah kesehatan reproduksi perempuan. Residen juga memberikan asuhan keperawatan dengan fokus penerapan teori need for help dari Wiedenbach pada ibu dengan terminasi kehamilan karena preeklamsia berat. Hasil menunjukkan bahwa penanganan segera dan terminasi kehamilan sesuai dengan indikasi dapat mencegah komplikasi dan kegawatan pada ibu dan bayi, serta mencegah terjadinya Sindrom HELLP dan Eklamsia. Penerapan teori model keperawatan Need For Help efektif untuk diaplikasikan pada kasus terminasi kehamilan karena preeklamsia berat. Pencapaian kompetensi perawat spesialis keperawatan maternitas dilakukan dengan penerapan peran perawat secara komprehensif.

**ABSTRACT**  
One of the causes of high maternal mortality rate is the complications of pregnancy and labor. A maternity nursing specialist has an important role to prevent maternal and fetal death. This report aimed to provide an overview of the implementation of maternity nursing specialist practice including nursing care of normal and high risk prenatal, intranatal, postnatal, and newborn, as well as women's health. Resident also provided nursing care focused on the application of Wiedenbach Need for Help Theory on mothers with pregnancy termination due to severe preeclampsia. Results showed that the immediate management and pregnancy termination as indicated could prevent complications and maternal and infant distress, as well as prevent HELLP Syndrome and eclampsia. The application of Wiedenbach Need for Help Model Theory was effective to be applied on cases of pregnancy termination due to severe preeclampsia. The maternity nursing specialist competencies were achieved by applying a nurse's roles comprehensively.
