

Human senses: touch and vision

Roberts, Sam.

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20428573&lokasi=lokal>

Abstrak

This series goes in search of the biological roots of our senses and to uncover why particular sights, sounds and smells and tastes have such powerful effects on us, how we manage to block out intense pain, and why our sense of balance keeps working under the most extreme of conditions. This episode deals with vision. Why is it that humans are so good at seeing some things, at other times their brains prevent them from seeing what's right in front of their eyes.
