**ABSTRAK**

Pada remaja, Psychotic-like experience memiliki asosiasi dengan internalizing problems. Penelitian ini bertujuan untuk mengetahui hubungan Psychotic-like experience dengan internalizing problems. Metode penelitian ini menggunakan pendekatan kuantitatif dengan alat ukur Strength and Difficulties Questionnaire (SDQ) untuk mengukur internalizing problems. Psychotic-like Experiences (PLE) digunakan untuk mengukur kecenderungan psikotik. Partisipan penelitian ini adalah remaja berusia 11-16 tahun yang tinggal di daerah rural di Karawang, Jawa Barat. Hasil penelitian ini menunjukkan bahwa tidak terdapat hubungan yang signifikan antara Psychotic-like experience dengan internalizing problems. Sebanyak 7% partisipan (n= 270) memiliki Psychotic-like experience. Penelitian lebih lanjut diperlukan untuk mengetahui faktor yang berkontribusi terhadap Psychotic-like experience.

**ABSTRACT**

Psychotic-like experiences have been found to have association with internalizing problems among adolescents. This research aim to investigate the correlation between psychotic-like experiences with internalizing problems. The Strength and Difficulties Questionnaire (SDQ) was used to examine internalizing problems. Psychotic-like Experiences (PLE) was used to examine psychotic tendencies. A total 270 adolescents (aged between 11-16 years old) who lives in rural area in Karawang participated in this research. In our study, 7% participants reported having more than two symptoms of PLE. The result showed that there is no significant correlation between psychotic-like experiences with internalizing problems. Further investigation are needed to examine which factor that give contribution to PLE.
