

## Pengamatan Ikan Napoleon (*Cheilinus undulatus*) di Pulau Maratua dan Pulau-pulau sekitarnya

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20436538&lokasi=lokal>

---

### Abstrak

Napoleon fish (*Cheilinus undulatus*) is one of wrasses that has a high value in the worlds market. This paper present the existence of Napoleon fish of Maratua Island, East Borneo as one of its habitat in Indonesia and current records influencing the social-economic conditions there. The existence of Napoleon fish were detected by GPS (Global Positioning System) using Density Survey Method at six station of three different island i.e. Maratua, Kakaban, and Atol of Karang Muaras. During the observation, four Napoleon fish were found successfully in the northern coastal area of Kakaban Island. Unsustainable fishing activities such as using the potassium cyanide, fish bomb, and illegal fishing suggested as reasons of dramatic declining in the fishery production
