

Penggunaan kipas gigi pada siswa taman kanak-kanak

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20437172&lokasi=lokal>

Abstrak

The objective of this activity was to give problem solving of dental health promotion to kindergarten parents by simple innovation method including students and their parents, so that they both could be joining active emotionally. Until nowadays, dental health education to the kindergarten children doesn't do much. As we know, decay in this age can make many problems related with nutrition intake that will influence their growth. It's needed to make an effective education method to the kindergarten children that we hope it can make better dental health awareness since early. This paper describes a simple innovation method named the TOOTH FAN (KIPAS GIGI) which is a recording system shaped like a fan where each piece represents each tooth element that informing the dental health status. Data in KIPAS GIGI is written in a simple language casily understood, eg. decay, filling and missing. Using KIPAS GIGI is reported can be done well and effective in Trisula Kindergarten and Mutiara Kindergarten in Kecamatan Kutoarjo and also Widodo Kindergarten in Kecamatan Butuh, Kabupaten Purworejo. It shows increasing knowledge and awareness in parents as the object of education. Therefore, KIPAS GIGI method is a prospective undertaking to be used in Kindergarten to increase their dental health awareness.
