

Perawatan maloklusi kelas II skeletal dengan mandibula retrognatism pada pasien usia tumbuh kembang dengan menggunakan peranti twin block

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20437316&lokasi=lokal>

Abstrak

This case report described the skeletal and dental changes contributing to class II skeletal with mandibular retrognathism correction with Twin Blocks appliance. Cephalometric evaluation were compared between pre-treatment and after eight month treatment wearing Twin Blocks appliance at an 8 year, 1 month old girl patient. This short-term cephalometric study indicates that after eight month treatment with Twin Blocks appliance, the overjet reduces 3 mm correction of the first molar permanent from class II Angle (cusp to fossa) to class II Angle (cusp to cusp) and lengthening the mandible.
