

Paranasal sinus meningioma : case series

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20438202&lokasi=lokal>

Abstrak

Meningiomas accounts for 10-15% of all intraeranicd tumours, but meningiomas originating in the paranasal sinuses are rare. These tumors are thought to arise from embryonal arachnoid nests which were pinched off and left behind during embryonic development. We present Three cases, JO and 50 years old female and 7 years old male with paranasal sinus meningioma. Meningioma in this location needs special approach for surgical excision. We perform surgical excision in both cases and in one cases we join operation with otolaryngologist. All three cases have good outcome after surgery. We will discuss about the pathophysiology and surgical approach for meningioma in this location.
