

Surface modification technologies XIV: proceedings of the fourteenth International Conference on Surface Modification Technologies held in Paris, France, September 11-13, 2000

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20442523&lokasi=lokal>

Abstrak

Contents :

ForewordSurface Modifications in Aerospace ApplicationsIn Situ Formation of Titanium Carbide by Reactive Plasma Spraying with Elemental Titanium PowderA Comparative Study of Mechanical Properties and Residual Stress Distributions of Copper Coatings Obtained by Different Thermal Spray ProcessesDamage Progression in Thermal Barrier Coatings During Four-Point Bend Tests with Acoustic Emission MonitorA Study of the Strength of Spray Coated Layer by Cross Sectional Electron MicroscopyA Comparative Study of Different Plasma Sprayed Coatings Applied to Railway Disc BrakesOptimization and Monitoring of the Production of Thermal Barrier CoatingsBenefits of Surface Preparation by Laser for Thermal Sprayed CoatingsFabrication of TiO₂ Photocatalytic Coating by Thermal Spray ProcessIndentation Fracture Toughness and Interfacial Indentation Tests Associated with Acoustic Emission on WC-Co Coated SpecimensFatigue Processes in Bodies with Surface CoatingsLaboratory Evaluation of Hot Erosion Resistance of Six Thermal Sprayed CoatingsVacuum Plasma Sprayed WC-12% Co Coatings: Optimization of Spraying Parameters and Subsequent Laser TreatmentOptical Properties of Al Film Deposited on PolymerSlurry and Thermal Spray Coatings for Protection of New Generation Steam Engine ComponentsSurface State Modifications in Powder Products Induced by a Spray-Coating TechniqueRelationship Between Dilution and Solidification Cracking in PTAW Ni-Base Superalloy OverlaysA Novel Friction Thermomechanical Process for Surface Modification of Aluminum CastingsCharacterization and Modelling of Multilayer Ti-Based CoatingElectrolytic Deposits on Stainless Steel as High Temperature CoatingsInvestigation of Ceramic Sol-Gel Thin Films for Wet Corrosion Protection of Mild SteelNeed for Environmentally Friendly Surface Modification Technology in the Japanese Automotive IndustryDevelopment of Bioceramic Composites: Processing Solutions and In-Vitro EvaluationsWear of Ultra High Molecular Weight Polyethylene Sliding Against a CoCrMo Coating Applied by Physical Vapor DepositionPhysico-Chemical and Mechanical Approaches to the Dentin-Resin Adhesive InterfaceSurface Quality of Master Screw Dental ImplantSuspension Plasma Sprayed Hydroxyapatite Nano-Powder for Biomedical ApplicationCeramographic Analysis of Ceramo-Metal Bonding InterfacesA Nanoindentation Study of PVD WC/C Coatings Supported by Cross-Sectional Electron Microscopy ObservationsEffect of a Ni Interlayer on the Corrosion Behavior of CrN PVD Coating Deposited onto Plastic Mold SteelsStructure of Diamond-Like Carbon Films Obtained by PECVD: XPS, X-Rays Reflectometry and Hardness MeasurementsApplication of Surface Modified Silica Thin Films to BiosensorsSurface Treatments and Coatings in the Steel-Making Industry: From Metallurgy to ProcessingChanges in Structure and Properties of AlN Thin Films Due to Surface

Oxidation

- Carbo-Nitride Thin Films and Nanofibers Synthesized by HF-CVD
- Effect of Various Plasma Nitriding Procedures on Surface Characteristics of P/M Ledeburitic Tool Steels
- Characterization of PVD Ni Coatings Deposited at Various Conditions
- Challenges and Opportunities in Surface Engineering
- Correlations Between Surface Modification and Tribological Performance of Brake Pads
- Development of Novel Fe-Cr-C/NbC Composite Materials for Wear Resistant Coatings Using a Laser Rapid-Alloy-Prototyping Technique
- Dose Rate Influence on the Microstructure of Chromium Steels Subjected to Low-Energy Nitrogen Ion Implantation
- Effect of Coatings on Mechanical Properties and Fretting Fatigue Strength of a Titanium Alloy in Cryotechnical Environment
- Wear Behavior of Colored Stainless Steel
- Wear Analysis of Coated Carbide Tools when Machining Nickel Base, Inconel, Alloy
- Wear Modelling of Contact Plan/Plan Between Graphite and Titanium Alloy
- Wear Criterion for Cold Forging Tool
- Surface Modification of a FeCrAlY-Alloy by Ion Implantation and Oxidation for Potential Implant Applications
- Functionally Graded Materials Produced by Laser Cladding: A Novel Approach
- Improvement of Adhesive Properties of Polymers After Excimer Laser Irradiation
- Properties and Applications of Coatings Deposited by Laser Beam
- WC-Co Plasma Sprayed Coatings Partially Re-fused with Laser
- Modeling of Temperature Fields in Graphite Target at Pulsed Laser Deposition of CN_x Films
- Laser Treatment of BN Pre-Coated Steels: Correlation of Hardness and Microstructure
- Surface Alloying of Ceramic Powders on F
