Abstrak

Discipline strategies yang diterapkan oleh ibu merupakan salah satu faktor penting dalam pemahaman theory of mind anak. Meskipun demikian, masih sangat sedikit penelitian yang mempelajari mengenai discipline strategies ibu dan theory of mind. Selain itu, penelitian sebelumnya hanya mengaitkan discipline strategies ibu dengan first-order theory of mind saja, dan belum ada yang mengaitkan dengan second-order theory of mind secara bersamaan. Padahal perkembangan pemahaman theory of mind pada anak memiliki dua tahapan, yaitu first-order dan second-order theory of mind. Tujuan dari penelitian ini adalah untuk mengidentifikasi jenis discipline strategies yang digunakan oleh ibu, dan mempelajari kontribusi delapan jenis discipline strategies ibu terhadap first-order theory of mind dan second-order theory of mind pada anak usia 5 – 6 tahun. Sebanyak 104 anak dan ibu mengikuti kegiatan penelitian ini. Pemahaman first-order dan second-order theory of mind anak diukur melalui 6 komponen theory of mind dengan metode tanya jawab, sedangkan penggunaan discipline strategies ibu diukur dengan kuesioner. Discipline strategies discuss dan boss yang digunakan oleh ibu memprediksi pemahaman first-order maupun second-order theory of mind anak. Di sisi lain, discipline strategies let's child decide, how feel, silence, social norms, parent emotion dan persuasive tidak memberikan kontribusi yang signifikan terhadap pemahaman first-order maupun second-order theory of mind anak.

Mother's discipline strategies is one of crucial factors in children's theory of mind understanding. Nonetheless, there is still a limited number of studies covering mother's discipline strategies and theory of mind. In addition, previous studies only associate mother's discipline strategies with first order theory of mind, and no one has to associate with second order theory of mind simultaneously. Whereas, development of children's theory of mind understanding has two stage, first order and second order theory of mind. The current study investigated mother's discipline strategies, and investigated the contribution of eight mother's discipline strategies with children's first order and second order theory of mind among 5-6 years old children. 104 children and mothers are participated in this study. Children's first order and second order theory of mind understanding were measuring using 6 component of theory of mind with question and answer method, while mother's discipline strategies was measuring by questionnaire. It was revealed that discuss and boss mother's discipline strategies could predict children's first order and second order theory of mind understanding. On the other hand, let's child decide, how feel, silence, social norms, parent emotion and persuasive discipline strategies had no significant contribution to children's first order and second order theory of mind understanding.
