Abstrak

ABSTRAK

Praktik klinik keperawatan anak menuntut mahasiswa berpikir cepat dan dinamis untuk merespon situasi yang ada di lahan praktik. Tujuan penelitian untuk mendeskripsikan secara mendalam pengalaman mahasiswa yang melaksanakan refleksi sebagai strategi pembelajaran mandiri untuk meningkatkan kemampuan berpikir kritis pada praktik profesi keperawatan anak. Metode yang digunakan yaitu kualitatif multiple instrumental case study. Partisipan berjumlah 11 orang melaksanakan refleksi selama 3 minggu menggunakan Model PiKir 5D. Pengumpulan data melalui studi dokumen, kuesioner evaluasi diri pre dan post refleksi, dan focus group discussion FGD . Hasil penelitian menunjukkan terdapat peningkatan level refleksi, sebagian besar partisipan mampu mencapai level critical reflector. Hasil evaluasi diri post refleksi partisipan merasakan peningkatan kemampuan berpikir kritis. Hasil FGD diperoleh 6 tema yaitu proses adaptasi refleksi 5D; fasilitasi model PiKir 5D; kesadaran diri; meningkatkan kemampuan berpikir kritis; meningkatkan pengetahuan, keterampilan, dan sikap; serta meningkatkan kepercayaan diri. Kesimpulan penelitian ini yaitu refleksi dapat dijadikan sebagai strategi pembelajaran mandiri untuk meningkatkan berpikir kritis mahasiswa. Saran peneliti, institusi pendidikan keperawatan menerapkan refleksi sebagai strategi untuk meningkatkan kemampuan berpikir kritis mahasiswa.

ABSTRACT

Clinical practice of pediatric nursing requires students to think quickly and dynamically to respond the situations in clinical area. The objective of the study was to describe the experience of students who carried out reflection as self learning strategies to improve critical thinking skills for students in internship program of pediatric nursing. The method of this study was qualitative using multiple instrumental case study approach. The number of the participants in this study was 11 participants carried out reflection practice for 3 weeks using PiKir 5D model. The collection of data through three ways, document study, self evaluation questionnaire pre and post reflection, and focus group discussion FGD . The result of the study showed that the level of reflection had improved some participants were able to achieve a critical reflector level. The result of self evaluation through participants noticed an improvement in critical thinking skill. FGD results was obtained 6 themes that are adaptation process of PiKir 5D Model facilitation of PiKir 5D Model self awareness improvement of critical thinking improvement of knowledge, skill, and attitude improvement of self confidence. The conclusion of the study was the reflection can be used as self learning strategies by students to enhance their critical thinking skills. The researchers suggest that the institution of nursing education apply reflection as a strategy to improve students' critical thinking skills.
