ABSTRACT

Explaining the basics of construction law, this is a practical and authoritative overview of the subjects that are at the heart of every construction law dispute. It is based on the concept that what sets construction lawyers apart from other lawyers is not just an understanding of the principles of law which govern construction work, but also their practical understanding of the industry itself and how it works.

Fundamentals of Construction Law, written by some of the best and most seasoned practitioners in the field, explains the key principles of construction law in a logical, useful format, making it a must have for any lawyer practicing in this area, particularly those new to the field. Unique among construction treatises, it explains the perspectives of the various players in a construction project - owner, designer, constructor, and surety. Chapter authors provide extensive discussion of construction contracts and explain key contract provisions. Other topics include insurance, scheduling, delivery systems, payment provisions, change orders, termination, government contracts, defects, damages, and alternative dispute resolution negotiations and techniques.
