Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20457066&lokasi=lokal>

Abstrak

Penelitian ini dilakukan untuk melihat peranan family functioning dalam memprediksi perilaku self-concealment pada remaja. Pengukuran variabel family functioning menggunakan alat ukur Family Assessment Device FAD versi 3. Pengukuran self-concealment menggunakan alat ukur Self-Concealment Scale SCS .

Partisipan dalam penelitian ini berjumlah 571 dengan rentang usia 13-21 tahun. Pengujian hipotesis menggunakan teknik simple regression, diperoleh hasil bahwa family functioning dapat menjadi prediktor munculnya perilaku self-concealment $R=.376$, p

.....This research was conducted to see the role of family functioning in predicting self concealment behavior among the adolescents. The measurement of family functioning variables was using measuring instrument of Family Assessment Device FAD version 3. The measurement of self concealment was using the Self Concealment Scale SCS.

The participants in this study amounted to 571 with an age range of 13 21 years old. Hypothesis testing using simple regression technique, obtained the result that family functioning can be a predictor of the emergence of self concealment behavior $R .376$, p
