Abstrak

Analisis Kelengkapan Pengisian Informed consent Pada Rekam Medis Pasien Tindakan Bedah di RS X Tahun 2016 Penelitian ini membahas kelengkapan pengisian informed consent tindakan bedah di RS X tahun 2016. Tujuan penelitian ini adalah agar dapat mengetahui gambaran kelengkapan pengisian informed consent tindakan bedah. Jenis penelitian ini adalah kuantitatif dengan pengisian kuesioner dan kualitatif dengan wawancara mendalam dan telaah dokumen formulir informed consent menggunakan daftar tilik serta menggunakan data sekunder. Dari hasil penelitian ini didapatkan sebanyak 56,9 dari total formulir yang diamati telah diisi secara lengkap.

Hasil penelitian ini menunjukkan bahwa belum adanya Standar Prosedur Operasional dan Kriteria tentang kelengkapan pengisian formulir informed consent tindakan bedah. Hal tersebut dapat menjadi salah satu faktor yang menyebabkan tidak lengkapnya pengisian formulir informed consent tindakan bedah di RS X.
.....Analysis of the Completeness of Filling Informed consent Forms in Surgery Patients Medical Record at Hospital X 2016 This study explores the completeness of filling surgery informed consent forms at Hospital X in 2016. The aim of this study is to illustrate the degree of completeness of filled in consent forms pertaining to surgical actions. The design of this study uses a quantitative method through questionnaires, a qualitative method through in depth interviews and document review informed consent forms through checklists, and also the use of secondary data.

Results of this study shows that an average of 56.9 of consent forms were completely filled. This study also reveals that there is a lack of Standard Operating Procedure and criteria about completed informed consent forms for surgery, which may be one of the factors contributing to incomplete surgery informed consent forms at Hospital X.
