Abstrak

ABSTRAK

Aksi-reaksi antara manusia subjek dengan ruang arsitektur objek menghasilkan berbagai respon yang berbeda karena variabel yang beragam baik dari subjek maupun objek. Kepribadian introvert merupakan salah satu variabel keragaman manusia dimana mereka sulit untuk beradaptasi dengan kondisi ruang over-stimulus. Perilaku teritorial mikro merupakan salah satu upaya meregulasi kondisi ruang over-stimulus dengan melibatkan fitur desain atau hanya dengan gestur tubuh. Keterlibatan fitur desain tergantung pada fleksibilitas regulasi ruang yang terbagi menjadi 3, yaitu fixed-feature space, semifixed feature space, dan informal space.

ABSTRACT

Action reactions between humans subjects and architectural spaces objects produce different responses because of varied variations from both the subject and the object. Introversion is one of the variables of human diversity in which they are difficult to adapt to over stimulus space conditions. Micro territorial behavior is one of the attempts to regulate over stimulus spatial conditions by involving design features or simply with body gestures. The involvement of design features depends on the flexibility of spatial regulation that is divided into 3, that is fixed feature space, semifixed feature space, and informal space.
