Abstrak

Tujuan: Didapatkannya informasi mengenai hubungan oral health literacy ibu dengan utilisasi pelayanan kesehatan gigi dan mulut anak.

Metode: Desain penelitian yang digunakan adalah cross sectional menggunakan kuesioner HeLD dan kuesioner utilisasi pelayana kesehatan gigi dan mulut anak.

Hasil: Nilai reliabilitas internal kuesioner HeLD adalah sebesar 0.90 Cronbach's alpha. Terdapat perbedaan bermakna secara statistik antara utilisasi pada kelompok dengan oral health literacy rendah dengan kelompok dengan oral health literacy tinggi.

.....

Goal: The goal of this thesis is to get information about the relationship of mother's oral health literacy with the utilization of children's teeth and mouth treatment.

Methods: This Thesis uses cross sectional method that is utilized with HeLD Questionnaire and another questionnaire regarding the utilization of children's teeth and mouth health treatment.

Result: Internal reliability of the HeLD questionnaire reaches 0.90 Cronbach's alpha . There is significant difference between utilization of the group with low oral health literacy and the group with high oral health literacy p
