ABSTRAK
Keperawatan menurut Mc Mahon merupakan terapi yang melibatkan tiga 3 komponen yaitu partnership, intimate dan reciprocity disetiap tindakan keperawatan. Begitu juga yang harus dilakukan oleh perawat ners spesialis atau perawat lanjutan. Pelaksanaan praktik residensi keperawatan khususnya neurologi dilakukan sebagai bagian dari proses untuk mencapai pendidikan perawat ners spesialis. Perawat ners spesialis dalam memberikan asuhan keperawatan harus memiliki tujuh kompetensi yaitu memberikan pelayanan langsung, konsultasi, kepemimpinan, kolaborasi, pendidikan, penelitian dan pengambil keputusan yang mengedepankan etik. Rangkaian pendidikan spesialis keperawatan ini adalah mengelola kasus utama, menyusun kasus resume yang dilaporkan sebanyak 30 pasien dengan gangguan neurologi, melakukan Eviden based Nursing EBN latihan Menelan dengan madu pada pasien disfagia serta melakukan inovasi membuat video edukasi. Kasus terbanyak selama praktik adalah stroke dan diagnosis keperawatan terbanyak yaitu resiko ketidakefektifan perfusi jaringan serebral, gangguan mobilisasi dan gangguan pemenuhan kebutuhan personal hygiene.. Rekomendasi: analisis lebih dalam tentang latihan menelan dengan madu dan analisis kognitif, afektif dan psikomotor yang diperoleh saat menggunakan video edukasi pada pasien

ABSTRACT
Nursing in Mc Mahon say that nursing is a therapy that involves three 3 components of partnership, intimate and reciprocity in every action of nursing. So also must be done by a specialist nurse nurse or advanced nurse. Implementation of nursing residency practices, especially neurology is done as part of the process to achieve specialist nurse education. The role of nurse specialist in providing nursing care should have seven competencies that is to provide direct services, consultation, leadership, collaboration, education, research and decision makers that put ethics forward. This series of nursing specialist education is managing the main case, compiling 30 reported cases of patients with neurological disorders, performing an Evidence based Nursing EBN and innovating with patients with neurological disorders. The most cases during the practice were stroke and the most common nursing diagnoses were the risk of perfusion of cerebral tissue, impaired mobilization and impaired fulfillment of personal hygiene needs. EBN is a swallowing exercise with honey and the implementation of group innovation to make educational videos to increase self awareness and family against the risk of recurrent stroke. Recommendations deeper analysis of swallowing exercises with honey and cognitive, affective and psychomotor analyzes obtained when using educational videos in patients
