Abstrak

Penelitian ini dilakukan untuk mengetahui hubungan antara perceived parenting style dan coping style to school related stress pada remaja. 442 siswa/I SMA kelas 3 turut berkontribusi dalam penelitian ini. Perceived Parenting Style diukur dengan kuesioner Parenting Style Questionnaire PSQ yang dikembangkan oleh Lamborn et al 1991, sedangkan Coping style to school Related Stress diukur dengan menggunakan Coping Across Situation Questionnaire CASQ yang dikembangkan oleh Seiffge-Krenke et al 2001. Hasil penelitian memaparkan bahwa terdapat hubungan yang signifikan $F= 2,748$, $p0,05$ antara perceived parenting style dan internal coping style pada remaja. Gambaran mengenai jenis persepsi parenting style juga dapat dilihat dari penelitian ini. Diketahui pula bahwa anak yang menggunakan active coping style cenderung mempersepsikan orang tua mereka dengan gaya pengasuhan yang authoritative dibanding dengan gaya pengasuhan lainnya.

.....This research was investigated the relationship between perceived parenting style and coping style to school related stress in adolescence. 442 students was participated in this research. Perceived Parenting Style was measured by Parenting Style Questionnaire PSQ that previously developed by Lamborn et al 1991, and Coping style to school Related Stress was measured by Coping Across Situation Questionnaire CASQ that was developed by Seiffge Krenke et al 2001.
