ABSTRACT

Kurangnya persiapan dalam masa pendidikan perawat menjadi penyebab adanya persepsi yang salah mengenai asuhan perawatan spiritual. Pada institusi pendidikan, belum banyak yang memasukan perawatan spiritual dalam kurikulum pengajaran. Penelitian ini bertujuan untuk mengetahui perbandingan persepsi antara mahasiswa keperawatan di Perguruan Tinggi umum dan Perguruan Tinggi berbasis agama tentang perawatan spiritual. Metode penelitian yang digunakan adalah dekriptif komparatif. Jumlah sampel sebanyak 141 mahasiswa keperawatan yang diambil dengan teknik consecutive sampling. Data dikumpulkan menggunakan kuesioner Spiritual Care Giving Scale SCGS yang telah diterjemahkan dalam Bahasa Indonesia dengan cronbach alpha 0,950. Hasil penelitian menunjukkan rata-rata responden memiliki persepsi baik dengan rata-rata nilai skor 171,39 83,87, serta tidak ada perbedaan yang signifikan antara persepsi mahasiswa di Perguruan Tinggi umum dan Perguruan Tinggi berbasis Agama tentang perawatan spiritual p value = 0,612; a = 0,05. Diperlukan penelitian lebih lanjut mengenai faktor-faktor yang mempengaruhi persepsi mahasiswa keperawatan tentang perawatan spiritual.

ABSTRACT

Lack of preparation in nursing education has led to false perceptions about spiritual care. There were just a few institution that included spiritual care in the curriculum. This study aimed to compare the perceptions between nursing students in public university and religious based university on spiritual care. The research used method descriptive comparative. The number of samples was 141 nursing students taken by consecutive sampling technique. Data were collected using Spiritual Care Giving Scale SCGS questionnaires was translated into Bahasa Indonesia with cronbach alpha 0.950. The result of research showed that average of respondents had good perception about spiritual care with mean score 171,39 83,87 and there was no significant difference between student perception in public university and religious based university about spiritual care p value 0,612 a 0,05. Further research is needed on the factors that affect the perception of nursing students about spiritual care.
