Abstrak

ABSTRAK

Penelitian ini dilakukan untuk mengetahui pengaruh kecemasan karir terhadap commitment to career choice melalui peran moderasi kelekatan orang tua pada remaja. Commitment to career choice merupakan keadaan seseorang dalam perkembangan karirnya yang meliputi adanya kepastian pada suatu pilihan karir, bersikap optimis pada masa depan dan menyadari akan adanya hambatan pada karirnya Blustein, Ellis, Devenis, 1989 . Penelitian ini akan memfokuskan pada salah satu dimensi commitment to career choice yaitu tendency to foreclose yang merupakan keinginan untuk secepat mungkin berkomitmen pada suatu pilihan karir tanpa periode eksplorasi. Penelitian ini menggunakan pendekatan kuantitatif dengan partisipan siswa remaja sebanyak 315 orang. Commitment to career choice diukur dengan menggunakan Commitment to Career Choice Scale skala tendency to foreclose Blustein, Ellis, Devenis, 1989 . Kecemasan karir diukur menggunakan Career Anxiety Scale Thai, 2014 dan kelekatan orang tua diukur dengan Inventory of Parent Attachment Armsden Greenberg, 1987 . Hasil penelitian menunjukkan bahwa kecemasan karir memiliki pengaruh terhadap commitment to career choice dimensi tendency to foreclose melalui peran moderasi kelekatan orang tua. Penelitian ini menyertakan implikasi dan saran untuk penelitian selanjutnya.

ABSTRACT

The purpose of this study was to examine the moderating role of parental attachment towards the effect of career anxiety on commitment to career choice. Commitment to career choice is a position in individual career development that includes certainty about one's career choice, a positive sense of vocational future and awareness of potential obstacles Blustein, Ellis, Devenis, 1989 . This study focus on one dimension of commitment to career choice, tendency to foreclose. Tendency to foreclose is the desire to commit to one career decision as soon as possible without any period of exploration. This study used quantitative approach, involving 315 high school student as participants. Commitment to career choice was measured using tendency to foreclose scale in Commitment to Career Choice Scale Blustein, Ellis, Devenis, 1989 . Career Anxiety was measured using Career Anxiety Scale Thai, 2014 and parental attachment was measured using Inventory of Parent Attachment Armsden Greenberg, 1987 . The results indicated that there is significant effect of career anxiety on commitment to career choice with parental attachment as a moderating variable. This study concludes with implication and suggestions for future research.
