Abstrak

Praktik klinik residensi keperawatan medikal bedah pada pasien gangguan sistem kardiovaskular bertujuan untuk mengimplementasikan peran perawat spesialis sebagai pemberi asuhan keperawatan, edukator, peneliti, dan inovator. Peran pemberi asuhan keperawatan dilakukan dengan menggunakan pendekatan Teori Model Adaptasi Roy pada pasien ADHF Acute Decompensated Heart Failure dan 30 pasien lainnya dengan berbagai gangguan sistem kardiovaskular. Peran sebagai edukator dilakukan oleh perawat spesialis terhadap pasien dan juga rekan sejawat di tatanan pelayanan rumah sakit. Penerapan EBN Evidence Based Nursing yaitu pemberian Ice Bag di area femoralis untuk nyeri pada pasien yang menjalani PCI Percutaneous Coronary Intervention dilakukan untuk mengaplikasikan peran sebagai peneliti. Proyek inovasi juga dilakukan sebagai perwujudan peran sebagai inovator yaitu melalui pelaksanaan proyek inovasi berupa penyusunan panduan budaya keselamatan pasien menggunakan kuisioner.

.....

The clinical practice of medical surgical nursing residency in patients with cardiovascular system disorders aims to implement the role of specialist nurse as care provider, educator, researcher, and innovator. The role of nursing care providers is have been done using the Roy Adaptation Model Theory approach in ADHF Acute Decompensated Heart Failure patients as well as 30 other patients with various other cardiovascular system disorders. The role of educator is performed by specialist nurses on patients as well as colleagues in hospital service arrangements. The implementation of EBN Evidence Based Nursing is the application of Ice Bag in the femoral region for pain in patients undergoing PCI Percutaneous Coronary Intervention performed to apply the role as a researcher. The innovation project is also carried out as a manifestation of the role of innovator through the implementation of innovation projects in the formulation of patient safety culture guidance using HSOPSC Hospital Survey On Patient Safety Culture questionnaire.
