Abstrak

This book provides users of the Wechsler Adult Intelligence Scale (WAIS IV) with information on applying the WAIS IV, including additional indexes and information regarding use in special populations for advanced clinical use and interpretation. The book offers sophisticated users of the WAIS IV and Wechsler Memory Scale (WMS IV) guidelines on how to enhance the clinical applicability of these tests.

The first section of the book provides an overview of the WAIS-IV, WMS IV, and new Advanced Clinical Solutions for Use with the WAIS IV/WMS IV (ACS). In this section, examiners will learn:

Normal versus atypical score variability

Low-score prevalence in healthy adults versus clinical populations

Assessing whether poor performance reflects a decline in function or is the result of suboptimal effort

New social cognition measures found in the ACS are also presented. The second part focuses on applying the topics in the first section to specific clinical conditions, including recommended protocols for specific clientele (e.g. using demographically adjusted norms when evaluating individuals with brain injury).

Common clinical conditions are discussed, including Alzheimer's disease, mild cognitive impairment, traumatic brain injury, and more. Each chapter provides case examples applying all three test batteries and using report examples as they are obtained from the scoring assistant. Finally, the use of the WAIS IV/WMS IV and the ACS in forensic settings is presented.
