ABSTRAK

Kekerasan dalam hubungan pacaran dapat terjadi dalam bentuk kekerasan seksual, fisik, maupun psikologis. Penelitian ini dilakukan untuk mengetahui pengaruh investasi dan self-efficacy dalam hubungan romantis terhadap komitmen korban kekerasan dalam hubungan berpacaran. Investasi dan komitmen diukur dengan menggunakan Investment Model Scale (IMS) milik Rusbult, Martz, dan Agnew (1998), sedangkan self-efficacy dalam hubungan romantis diukur dengan alat ukur Self-efficacy in Romantic Relationship (SERR) milik Riggio et al. (2011). Partisipan dalam penelitian ini berjumlah 190 orang yang merupakan perempuan berusia 18-25 tahun, sedang menjalani hubungan pacaran minimal enam bulan, dan mengalami kekerasan dalam hubungannya. Teknik analisis yang digunakan adalah analisis regresi berganda. Hasil penelitian ini menunjukkan bahwa investasi dan self-efficacy dalam hubungan romantis memprediksi komitmen dalam hubungan korban kekerasan secara positif.

ABSTRACT

Abusive behavior in a relationship can occur in the form of sexual, physical, and psychological abuse. This research was conducted to determine the effect of investment and self-efficacy in romantic relationship on the commitment of victims in an abusive relationship. Investment and commitment are measured by the Investment Model Scale (IMS) from Rusbult, Martz, and Agnew (1998), while self-efficacy in romantic relationships is measured by the Self-Efficacy in Romantic Relationship (SERR) from Riggio et al. (2011). The number of participants involved is 190 people, that consists of women aged 18-25 years old, who are in a relationship with a minimum duration of six months, and currently a victim in an abusive relationship. This research used multiple regression analysis. The result shows that investment and self-efficacy in a romantic relationship predict commitment of the victims in abusive dating relationship.
