

Characterization of SAR clutter and its applications to land and ocean observations

Gao, Gui, author

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20507114&lokasi=lokal>

Abstrak

This book discusses statistical modeling of single- and multi-channel synthetic aperture radar (SAR) images and the applications of these newly developed models in land and ocean monitoring, such as target detection and terrain classification. It is a valuable reference for researchers and engineers interested in information processing of remote sensing, radar signal processing, and image interpretation.
