

Collaborative Governance Dalam Pencegahan Kebakaran Hutan dan Lahan (Karhutla) di Provinsi Riau = Collaborative Governance in Preventing Forests and Land Fires in Riau Province

Damanik, Melvina Ochtoro, author

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=20523673&lokasi=lokal>

Abstrak

Karhutla di Provinsi Riau selalu menjadi sorotan karena ulah manusia yang menyebabkan kerusakan ekosistem hingga kestabilan politik dengan negara tetangga. Untuk menyingkapinya, Presiden memprioritaskan upaya pencegahan melalui kolaborasi multisektoral antara pemerintah, swasta, hingga masyarakat. Penelitian ini bertujuan untuk menganalisis proses serta faktor-faktor yang mempengaruhi dalam kolaborasi pencegahan karhutla dengan model collaborative governance. Hasil penelitian menunjukkan bahwa proses collaborative governance secara keseluruhan sudah diterapkan meskipun diperlukan penyempurnaan pada proses dan faktor-faktor yang mempengaruhi kolaborasi. Intensitas dialog tatap muka masih rendah dan agenda pembahasan para aktor masih umum terhadap pengendalian kerhutla. Hasil sementara kolaborasi pencegahan belum terukur dengan baik sehingga ego-sektoral terlihat melalui berbagai program para aktor yang sifatnya mirip. Faktor-faktor yang menghambat kolaborasi adalah desain kelembagaan belum mengalokasi tugas pencegahan para aktor dengan jelas yang beresiko pada tumpang tindih kegiatan dan menurunnya transparansi kolaborasi. Anggaran pencegahan belum memadai karena Provinsi Riau belum memiliki dana alokasi khusus untuk pencegahan dan hanya bergantung pada anggaran aktor yang terlibat.

.....Karhutla in Riau Province has always been in the spotlight because of human activities that have caused damage to the ecosystem and political stability with neighboring countries. The President prioritizes prevention efforts through multi-sector collaboration between government, private sector, and community. This study aims to analyze the process and the factors that influence collaboration in preventing ‘karhutla’ with the collaborative governance model. The study indicates that collaborative governance process as a whole has been implemented although improvements are needed in the process and the factors that affect collaboration. Intensity of face-to-face dialogue is still low and the discussion is still on controlling ‘karhutla’. The interim results of prevention collaboration haven’t been well measured so that ego sector can be seen through various programs of actors that are similar in nature. The factors that hinder collaboration are the institutional design hasn’t allocated the task of preventing clearly so it’s risky to overlapping activities and decreasing collaboration transparency. The budget of prevention is not sufficient because Riau Province doesn’t have yet a special allocation fund for prevention and depends on the budget of the actors involved.
