Abstrak

Apotek merupakan sarana pelayanan kefarmasian tempat dilakukan praktek kefarmasian oleh Apoteker. Standar pelayanan kefarmasian di apotek meliputi standar pengelolaan sediaan farmasi, alat kesehatan, dan bahan medis habis pakai serta pelayanan farmasi klinik. Kegiatan pengelolaan sediaan farmasi meliputi kegiatan perencanaan, pengadaan, penerimaan, penyimpanan, pemusnahan, pengendalian, serta pencatatan dan pelaporan. Sedangkan pelayanan farmasi klinik meliputi kegiatan pengkajian resep, dispensing, pelayanan informasi obat (PIO), konseling, pelayanan kefarmasian di rumah, pemantauan terapi obat (PTO) dan monitoring efek samping obat (MESO). Analisis ini dilakukan untuk memahami peran dan tanggung jawab apoteker di apotek serta mengetahui segala kegiatan di apotek, terutama cara penyimpanan sediaan farmasi dan pelayanan farmasi klinik. Pengumpulan data dilakukan di Apotek Roxy Jati Baru pada periode 8 Februari – 6 Maret 2021 dengan cara observasi cara penyimpanan sediaan farmasi dan alur pelayanan resep. Berdasarkan pelaksanaan tugas khusus terkait analisis penyimpanan sediaan farmasi dan pelayanan farmasi klinik di Apotek Roxy Jati Baru dapat disimpulkan bahwa penyimpanan sediaan farmasi sudah sesuai dengan peraturan yang berlaku, namun kegiatan pelayanan farmasi klinik hanya sebagian yang sesuai dengan peraturan perundang-undangan karena konseling, home pharmacy care, pemantauan terapi obat, dan monitoring efek samping obat belum dilaksanakan dengan maksimal.

.....A drugstore is a pharmaceutical service facility where pharmacists practice pharmacy. Pharmaceutical service standards in pharmacies include management standards for medicine, medical devices, and medical consumables as well as clinical pharmacy services. Pharmaceutical preparation management activities include planning, procurement, receipt, storage, destruction, control, and recording and reporting activities. While clinical pharmacy services include prescription assessment, dispensing, drug information services (PIO), counseling, pharmaceutical services at home, monitoring drug therapy (PTO), and monitoring drug side effects (MESO). This analysis was conducted to understand the roles and responsibilities of pharmacists in pharmacies and to know all activities in pharmacies, especially the storage of pharmaceutical preparations and clinical pharmacy services. Data collection was carried out at the Roxy Jati Baru Pharmacy in the period February 8th – March 6th 2021 by observing the drug storage method and the flow of prescription services. Based on the implementation of the drug storage method and clinical pharmacy services at the Roxy Jati Baru, it can be concluded that the drug storage is per applied legislation, but only part of the clinical pharmacy service activities are under the legislation because counseling, home pharmacy care, monitoring of drug therapy, and monitoring of drug side effects have not been carried out optimally.
