Abstrak

Fakultas Farmasi mewadahi mahasiswa/i untuk dapat belajar dan mengembangkan diri menjadi seorang Apoteker yang handal di masa yang akan datang di masing-masing bidang penekunannya. Calon Apoteker tersebut sudah berkesempatan mendapatkan teori-teori dasar dalam berpikir, dan bertindak secara logis, akan tetapi, praktek di lapangannya belum atau masih jarang dilakukan oleh calon Apoteker tersebut. Oleh karena itu, Praktek Kerja Lapangan atau yang disebut juga dengan Praktik Kerja Profesi Apoteker (PKPA), diwajibkan sebagai syarat lulus bagi mahasiswa Apoteker di Universitas Indonesia. Untuk kali ini, PKPA dilakukan di Industri (PT SOHO Industri Pharmasi), Apotek (Apotek Roxy) dan Distributor (PT SamMarie Tramedifa). Di Industri, tugas utama terkait menganalisis cycle time empat varian produk pada periode April-Mei 2021, dan tercatat cycle time empat varian tersebut sebesar 6,04; 10,25; 6,17; dan 7 hari. Kedua, PKPA di Apotek ditugaskan untuk menganalisis penjualan produk pada bulan Februari 2021 dengan cara kategorisasi pengelolaan persediaan berdasarkan metode ABC atau prinsip pareto. Terakhir, saya berkesempatan PKPA di PT SamMarie Tramedifa dengan tugas khusus berupa peninjauan Prosedur Operasional Baku (POB) Tramedifa terkait Kualifikasi Tempat Penyimpanan Produk Rantai Dingin terhadap pemenuhan standar regulator. Berdasarkan hasil kajian tersebut, POB Tramedifa sudah memenuhi standar BPOM meskipun belum memenuhi standar kualifikasi dari WHO.

.....The Faculty of Pharmacy accommodates students to be able to learn and develop themselves to become a reliable pharmacist in the future in their respective fields of practice. Pharmacist candidate has had the opportunity to get basic theories in thinking and acting logically, however, the practice in the field has not been or is still rarely done. Therefore, the field work practice or also known as the Pharmacist Professional Work Practice (PKPA), is required as a graduation requirement for apothecary students at the University of Indonesia. PKPA is carried out in Industry (PT SOHO Industri Pharmasi), Pharmacies (Roxy Pharmacy) and Distributors (PT SamMarie Tramedifa). In Industry, the main task is to analyze the cycle time of four product variants in the April-May 2021 period, and the cycle time of the four variants is recorded at 6.04; 10.25; 6.17; and 7 days. Secondly, PKPA at Pharmacy is assigned to analyze product sales in February 2021 by categorizing inventory management based on the ABC method or the Pareto principle. Finally, I had the opportunity to PKPA at PT SamMarie Tramedifa with a special task in the form of reviewing Tramedifa's Standard Operating Procedures (SOP) regarding the Qualification of Cold Chain Product Storage against compliance with regulatory standards. Based on the study results, SOP Tramedifa has met the BPOM standards even though it has not met the qualification standards of the WHO.
