Abstrak

Penyebaran COVID-19 yang sangat cepat hampir menginfeksi seluruh wilayah yang ada di Indonesia. Wilayah-wilayah besar di Indonesia, seperti DKI Jakarta, Banten, Depok, Bekasi, dan Bogor masih menjadi bagian dari wilayah Indonesia dengan transmisi komunitas (Kemenkes, 2022). Community transmission biasanya terjadi dalam lingkungan masyarakat dan perkantoran. Peningkatan kasus COVID-19 pada klaster perkantoran dapat terjadi ketika kedisiplinan penerapan protokol kesehatan yang abai. Satgas COVID-19 mengkonfirmasi adanya peningkatan kasus COVID-19 yang ditemukan pada klaster perkantoran. Satgas COVID-19 mendapati adanya temuan 459 kasus pada 90 klaster perkantoran khususnya DKI Jakarta per 28 Juli 2020. Maka untuk membantu mengurangi penyebaran COVID-19 di perkantoran, diperlukan upaya perilaku pencegahan COVID-19 pada karyawan. Penelitian ini bertujuan untuk mengetahui hubungan pengetahuan karyawan terhadap kejadian COVID-19 di PT Angkasa Pura II Bandar Udara Internasional Soekarno Hatta. Penelitian dengan pendekatan metode kuantitatif, desain cross sectional, dilakukan pada 324 karyawan di PT Angkasa Pura II Bandar Udara Internasional Soekarno Hatta. Data dikumpulkan dengan kuesioner secara online dan dianalisis secara deskriptif. Dalam analisis hubungan pengetahuan karyawan dengan kejadian COVID-19 ditemukan adanya hubungan signifikan pengetahuan karyawan dengan kejadian COVID-19 di PT Angkasa Pura II Bandar Udara Internasional Soekarno Hatta dengan p-value sebesar 0.003. Bagi karyawan, diharapkan menerapkan protokol kesehatan dengan lebih baik lagi mengingat bandar udara merupakan pintu keluar dan masuknya masyarakat global, baik selama pandemi COVID-19 maupun pasca pandemi COVID-19. Menerapkan protokol kesehatan secara konsisten di masa pandemi COVID-19 penting untuk dilakukan saat ini agar seluruh aspek dapat kembali pulih dan bebas dari COVID-19. Disarankan ada evaluasi bersama bagi para karyawan akan pentingnya pengetahuan dalam menyikapi permasalahan COVID-19.

.....COVID-19 has spread rapidly and almost infected all regions in Indonesia. Large areas in Indonesia, such as DKI Jakarta, Banten, Depok, Bekasi, and Bogor, are still part of the territory of Indonesia with community transmission (Kemenkes, 2022). Community transmission usually occurs in the community and office environment. An increase in COVID-19 cases in office clusters can happen when discipline in implementing health protocols is neglected. The COVID-19 Task Force confirmed increased COVID-19 cases found in office clusters. The COVID-19 Task Force found that there were 459 cases in 90 office clusters, especially DKI Jakarta, as of July 28, 2020. So, to help reduce the spread of COVID-19 in offices, preventive behavior measures were needed for employees. This study aims to determine the employees' knowledge related to the incidence of COVID-19 at PT Angkasa Pura II Soekarno Hatta International Airport. Research with a quantitative method approach, cross-sectional design, was conducted on 324 employees at PT Angkasa Pura II Soekarno Hatta International Airport. Data were collected by online questionnaire and analyzed descriptively. In the analysis of the relationship between employees' knowledge

and the incidence of COVID-19, it was found that there was a significant relationship between employees' knowledge and the incidence of COVID-19 at PT Angkasa Pura II Soekarno Hatta International Airport with a p-value of 0.003. Employees are expected to implement health protocols better, considering that airports are the entry and exit points for the global community during the COVID-19 pandemic and after the COVID-19 pandemic. Implementing health protocols consistently during the COVID-19 pandemic is important now so that all aspects can recover and are free from COVID-19. It is recommended that there will be an evaluation for employees of the importance of knowledge in addressing the COVID-19 problem.
