Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=73244&lokasi=lokal>

Abstrak

Tarif pelayanan persalinan di Puskesmas Cimanggis Kota Depok yang berlaku saat ini adalah Rp. 75.000,0. Tarif ini sudah tidak sesuai lagi dengan kebutuhan operasional kamar bersalin di Puskesmas di mana Puskesmas harus melaksanakan tugas dan fungsinya sebagai tempat pertolongan persalinan yang bermutu dengan tidak hanya selalu bergantung kepada subsidi Pemerintah.

Dengan penyesuaian tarif diharapkan terwujud maksimalisasi pelayanan, karena tarif yang sesuai dengan kemampuan membayar masyarakat akan meningkatkan utilisasi. Penyesuaian tarif dilakukan melalui analisa tarif yang berdasarkan biaya satuan pelayanan persalinan, tingkat pengembalian biaya, tingkat kemampuan (ability to pay ATP) dan kebijakan tarif dan tarif pesaing yang setara.

Penelitian ini merupakan studi kasus yang dilakukan di unit kamar bersalin Puskesmas Cimanggis Kota Depok, yaitu menganalisa biaya dengan menggunakan data tahun 2000 dan menggunakan metode double distribution. Adapun untuk menilai tingkat kemampuan dan kemauan masyarakat membayar yaitu dengan mengolah data hasil survei terhadap masyarakat Kabupaten Bogor. Kemampuan masyarakat menurut ATP adalah : 92 % masyarakat mampu membayar Rp 72.000,0 ; 72% masyarakat mampu membayar Rp 270.000,0.; 50% masyarakat mampu membayar Rp.504.000,00.

Dari hasil analisa biaya kamar bersalin, didapatkan biaya satuan aktual Rp.585.593,00 dan biaya satuan normative Rp.524.626,00 Tarif pertolongan persalinan yang akan disarankan adalah Rp. 270.000,0. Saran perubahan tarif tersebut disambut baik oleh kepala Dinas Kesehatan Kota Depok serta Kepala Puskesmas Cimanggis, selanjutnya akan diusulkan ke Pemda untuk diproses lebih lanjut.

<hr>

A Case Study of Birth Delivery Rational Price Analysis at Puskesmas Cimanggis, City of Depok, 2002The current price of delivery service at Puskesmas Cimanggis City of Depok is Rp75.000,-. Considering the tasks and functions of Puskesmas as quality delivery service place that does not depend on government's support, the current price is not suitable with operational need of birth delivery room in Puskesmas. It is expected that price adjustment would maximize the service, because the appropriate price that is in line with people's ability to pay would increase utilization.

The price adjustment was conducted through price analysis based on the unit cost of birth delivery service, cost recovery rate, ability to pay (ATP), price policy, and competitor's price. This study is a study case that was conducted in Birth Delivery Room Unit at Puskesmas Cimanggis City of Depok by analyzing the cost

using double distribution method. The assessment of the ability to pay and the willingness to pay of the people in the District of Bogor was conducted by processing data from the survey result. The ability to pay according to ATP1 was 92% of people were able to pay as much as Rp72.000, 00; 72% of people were able to pay as much as Rp270.000,00 and 50% of people were able to pay as much as Rp504.000,00.

Based on the cost analysis of birth delivery room of this study, the actual unit cost was Rp585.593, 00 and normative unit cost was Rp524.626,00. Nevertheless, the recommended price of birth delivery service is Rp270.000, 00. The recommendation of the price change is accepted by the Head of District Health Office as well as the Head of Puskesmas Cimanggis. Furthermore, the next step would be proposing this pricing to the Local Government.
