<i>Local Birocracy Performance on The Controlling and to Meassures Forest and Land Fires (Case Study : at Pontianak and Sambas Districts West Kalimantan Province)

Forestry sectors has been playing important role on economics at West Kalimantan is 23,68% (BPS,2000). Forest in this province is categorized as protection forests, wildlife sanctuary, national park, limited production forest, production forest and converted areas, totally number 9,030 acre. Those natural resources is needs to be maintain and to preserve.

Forest and land fires is one of the cause of deforestation, often resulting in loss on several dimensions:such as economics, environmental, ecological, and social. According to Directorate Protection of Forestry Department (1998) in 1997 26.590,36 acres forest and land were on fires.This number included production forest 23.811 acres, ,wildlife sanctuary 1,378 acres. At national level West Kalimantan was on the third rank largest areas loss due to fire.

Local birocracy issued a policy in controlling and to measure forest and land fires. The policy carried out through institutions that were inter-related local birocracy. Institutions whose have responsibilities and duties in solving and handling the fires problems. Nonetheles, those institutions have not perform optimal yet in controlling and to measures, as much as expected. Therefore we need to study the main cause of non optimal performance institutions on local birocracy in controlling and to measure forest and land fires.This problem emerges research quootions:

In which inter-related local birocracy to performed a role in controlling and to measure forest and land fires at both districts Pontianak and Sambas West Kalimantan?

How does local birocracy perform in controlling and to measure forest and land fires at both districts Pontianak and Sambas West Kalimantan?

What are the component to support local birocracy performance in controlling and to measure forest and land fires at both districts Pontianak and Sambas West Kalimantan?

The aim of this research are:

Inter-related local birocracy to performed a role in controlling and to measure forest and land fires at both districts Pontianak and Sambas West Kalimantan.

Local birocracy performance in controlling and to measure forest and land fires at both districts Pontianak

and Sambas West Kalimantan.

The component to support local birocracy performance in controlling and to measure forest and land fires at both districts Pontianak and Sambas West Kalimantan.

This study referred to organizational structure, human resources, budgets, programmes, and facilities as supporting element on local birocracy performance.

Input elements are organizational structure, human resources, budgets, programmes and facilities. Those inputs later on became variables, which indicate local birocracy performance in controlling and to measure forest and land fires.

This research used survey method by using secondary data. Generally, this research used analytical descriptive methods and using ex post facto. In order to analyze raw data, this research used scaling techniques. Refers to goal achievement on each variables, the point of view of analysis is to know about performance of local birocracy at two districts; Pontianak and Sambas.

The conclusions could be drawn from this research are:

Inter-related local birocracy to performed a role in controlling and to measure forest and land fires at both districts Pontianak and Sambas West Kalimantan, are: Kantor Pengendalian Dampak Lingkungan and Dinas Kehutanan dan Perkebunan and Dinas Pertanian dan Kehutanan.

Local birocracy performance at Kantor Pengendalian Dampak Lingkungan and Dinas Pertanian dan Kehutanan in Pontianak districts categorized less succes; whereas at Sambas districts, performance at Kantor Pengendalian Dampak Lingkungan categorized not success and at Dinas Pertanian and Kehutanan less success in in controlling and to measures forest and land fires

3_ Component to support local birocracy performance in controlling and to measure forest and land fires at both districts Pontianak and Sambas West Kalimantan, are: organizational structure, human resources, budgets, programmes and facilities.

There are no decreasing number in forest and land fires and hotspots on 2002 mean vulnerability for forest and land fires in West Kalimantan province still high.</i>
