

Identifikasi dan analisis pengembangan karier fungsional keperawatan di IGD RSUPN Dr. Cipto Mangunkusumo

Simanjuntak, Saida, author

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=77620&lokasi=lokal>

Abstrak

Pelayanan instalasi gawat darurat merupakan tolok ukur kualitas pelayanan rumah sakit, karena merupakan Ujung tombak pelayanan rumah sakit, yang memberikan pelayanan khusus kepada pasien gawat darurat secara terus menerus selama 24 jam setiap hari. Karena itu pelayanan di IGD harus diupayakan seoptimal mungkin. Untuk itu diperlukan kualitas SDM profesional termasuk tenaga keperawatannya.

Sehubungan dengan tuntutan kualitas pelayanan tersebut aspek penghargaan baik material maupun non material merupakan aspek penting untuk mendorong motivasi kerja perawat.. Pengembangan karier adalah salah satu aspek yang terpenting dalam upaya meningkatkan mutu pelayanan di IGD RSUPN Dr. Cipto Mangunkusumo.

Kenyataan dilapangan menunjukkan bahwa sampai saat ini kemampuan SDM keperawatan yang ada belum memadai, belum sesuai dengan standar yang telah ditentukan. Berdasarkan hal tersebut, permasalahan dalam penelitian ini adalah belum terlaksananya pengembangan karier fungsional keperawatan yang berkesinambungan baik melalui pendidikan formal maupun tidak formal dalam upaya meningkatkan pelayanan yang profesional, berkualitas, aman dan nyaman.

Penelitian ini merupakan penelitian deskriptif dengan menggunakan pendekatan kualitatif. Pengumpulan data dilakukan melalui diskusi kelompok terarah, wawancara mendalam dan observasi.

Dari hasil penelitian terlihat bahwa pelatihan yang dilakukan belum merupakan bagian dari pengembangan karier staf, serta jenjang karier perawat belum ada, sehingga tugas dan tanggung jawab untuk semua perawat sama. Demikian juga tentang penyediaan dana untuk pendidikan dan pelatihan terbatas.

Untuk meningkatkan mutu pelayanan keperawatannya di IGD, maka IGD diharapkan mampu merumuskan jenjang karier keperawatan, dengan usulan semua perawat melewati fase-fase yang telah ditentukan sesuai peringkat fungsi, sehingga akan memberikan kejelasan peran dan fungsi untuk setiap tenaga keperawatan di IGD.

Saran penelitian adalah pembentukan tim pengembangan keperawatan untuk 1) menyusun kurikulum; 2) menyusun proposal; 3) mengkaji kebutuhan pendidikan dan pelatihan; 4) pemberian penghargaan yang memadai, sehingga tenaga keperawatan dapat mengembangkan profesi mereka dengan optimal.

<hr><i>The health services of emergency care unit is considered as one of the quality indicators of hospital

services because this unit provides a specialized service to the emergency patients continuously 24 hours a day, therefore the emergency care unit services should be facilitated optimally which is mainly determined by the qualified nursing personnel.

In relation to the demand for high quality of nursing services, the material and nonmaterial reward system need to be taken into consideration in motivating a better working performance of nurses. Career development as one of important aspects in improving the quality of emergency care at Dr:.Cipto Mangunkusumo National Hospital.

The existing performance of nursing personnel is still not adequate and do not meet the standard of nursing care. Based on this situation , the research problems was to answer the need of a well established nursing functional career development either through a formal or non formal education as an effort to improve a professional, and high quality of services by providing a safe, quick, and appropriate interventions.

This research study utilized a descriptive explorative design with a qualitative research methodology. The data was collected using a focus group discussion, interview and observation methods. The research study revealed that the existing training was not as an a part of career development system of nursing staffs, and even there was no career ladder for nurses, as a consequences, the tasks and responsibilities for all nurses were the same. In addition, there was lack of financial support for education and training of nurses.

In order to improve the quality of nursing services at the emergency care unit, it's expected and required that the career ladder should be formulated and proposed that all nurses should follow the stages of a standardized career development based on the factional Levels, so that there will be a clear roles and factions for each emergency care unit nursing personnel.

Based on the result of this study, it is recommended: 1) to develop a training curriculum; 2) to formulate a, training proposal; 3) to conduct a need assessment for education and training/ and 4) to provide an adequate and appropriate reward, which will optimally facilitate the personal and professional growth for each nursing personnel.</i>
