Abstrak

The objective of this research is to evaluate the availability of the fertilizers from the second line to the small distributor and the use of the fertilizer in the farming based on the SK Memperindag No 93/MPP/Kep/3/2001. Perception about the effectivity and benefit of the many kind of fertilizer for the paddy productivity also evaluated. Data are from three province (Jawa Barat, Jawa Tengah, Jawa Timur) both primary and secondary. Two Kabupatens are chosen from each province which one has higher and the other has lower productivity than province average. Data and Information using the Rapid Rural Appraisal (RRA) method which analyzed with the descriptive statistics. Some conclusion found are: (1) the decision of the Menperindag is quite effective to derive the availability of fertilizer to the small distributor level, (2) one of the reason of the decrease of the paddy productivity is the using of imbalance fertilizer, which is caused by the relative price of the fertilizers, (3) If the price of the fertilizer below the parity price, the force of the illegal export of the fertilizer increase, (4) because the high price of the fertilizer SP-36, the farmer will reduce the using of that, caused the low of purchasing power parity.
