Abstrak

Increased globalization and greater market transparency are making the issue of retaining customers more and more important in today's business environment. Recent management trends are leading companies to focus their efforts on customer relationship management in order to achieve long-term business success. Customer Relationship Management is both an old and a new concept in the healthcare industry. Recent changes to this industry are driving companies to move from product-centric to customer-centric businesses. Many companies need to develop new capabilities to sustain competitive advantage, which include formulating unique, direct relationships with the customer. By integrating all business operation aspects, firms translated into strategy. Because today, customers are a very important factor in companies' management with their power to change their short and long-term policies and strategies.

Market forces are pushing the healthcare industry such as Pediasure milk formula to change business processes, reduce administration costs and work efficiently in an accurate way. The CRM strategy is aimed to help healthcare organizations to understand the needs and habits of its members and provide better services to them in a more time-efficient manner. Through maintaining the customer database, companies can effectively integrate the operational, marketing, sales and other functions, and with the help from the CRM system to make it easier for everyone inside the organization to work together and share the information.

Customer database or information is the first step and foundation for any customer relationship management activity.

A case study with a qualitative approach was employed to examine the issues in recent marketing strategy. There are a number of reasons to study this issue: (1) Customer data or information are the foundation for implementing CRM. (2) Marketing strategies are constructed from the variety of customer databases the company has, in order to fit in with the customer needs, wants and requirements. (3) The process of implementing CRM strategy to gain customer loyalty is different from one to another. This study focuses on the process of CRM strategy to resist customer loyalty through customer database as a marketing strategy. Based on these approaches, emphasis is put on how to maintain the customer database, structure marketing strategy and process CRM to gain customer loyalty.

Based on the results of the study, it may be concluded that, (I) The process from strategy CRM into customer loyalty connected all factors, lost only one will lead to failure. As an outline, the process consists from customer

data turning into knowledge and will match it with marketing strategy implemented. (2) Customer database is a factor that lead to successful of implementing CRM Through data processing firm will get knowledge about their target and segmenting customer to optimalized their strategy and resources they have. (3) Transformation from customer database into smart action could be valued for competitive advantage, in this case marketing strategy structured from customer database.

Based on the above conclusion, the following recommendation might be taken into consideration: (1) Integration between factors perhaps represent the best way to maximize resources they have but as firm to consider to prevent from over lapping factor that occurred, firm needs accuracy in technology and technique. But for consideration success not only lead only by technology, it rather by mind set lead it. (2) Although customer database customer are the foundation for CRM implementation, but only qualified data are needed to avoid data that will blurred, infocused for firm or company to identified their customer. (3) Transformation data into marketing strategy flow inline with the first goal firm implemented these strategy.
