Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=9999920521784&lokasi=lokal>

Abstrak

Pendokumentasian keperawatan adalah bukti legal tindakan perawat kepada klien. Dokumentasi merupakan bagian terpenting dari asuhan keperawatan karena berisi rincian perjalanan klien selama proses perawatan. Dengan pendokumentasian yang lengkap, maka secara professional dapat di pertanggung jawabkan. Teknologi yang semakin berkembang berdampak pada ilmu keperawatan. Dokumentasi keperawatan berbasis komputer hadir sebagai wujud pengembangan teknologi terhadap asuhan keperawatan. Tingkat kepuasan perawat terkait pendokumentasian keperawatan ini diperlukan untuk meningkatkan mutu pelayanan. Penelitian ini bertujuan untuk mengidentifikasi gambaran kepuasan perawat terkait pendokumentasian keperawatan berbasis komputer di Rumah Sakit. Desain penelitian yang digunakan adalah cross sectional dengan jumlah sampel 127 perawat. Adapun variabel terkait yang di ukur dalam pendokumentasian keperawatan berbasis komputer diantaranya: karakteristik perawat sebagai responden, kepuasan perawat dalam mendokumentasikan asuhan keperawatan berdasarkan variabel EUCS. Tingkat kepuasan perawat diukur menggunakan kuesioner online (google form). Data hasil penelitian dianalisis dengan univariat dengan hasil menggambarkan karakteristik responden dan tingkat kepuasan berdasarkan karakteristik responden.

.....Nursing documentation is legal evidence of a nurse's actions towards clients. Documentation is the most important part of nursing care because it contains details of the client's journey during the care process. With complete documentation, it can be held accountable professionally. Increasingly developing technology has an impact on nursing science. Computer-based nursing documentation is present as a form of technology development for nursing care. The level of nurse satisfaction related to nursing documentation is needed to improve service quality. This study aims to identify a description of nurse satisfaction related to documenting computer-based nursing in hospitals. The research design used was cross sectional with a total sample of 127 nurses. The related variables measured in computer- based nursing documentation include: characteristics of nurses as respondents, nurse satisfaction in documenting nursing care based on EUCS variables. The level of nurse satisfaction was measured using an online questionnaire (google form). The research data were analyzed by univariate with the results describing the characteristics of the respondents and the level of satisfaction based on the characteristics of the respondents.
