Abstrak

Apotek merupakan salah satu sarana pelayanan kefarmasian dimana dilaksanakannya praktik kefarmasian oleh Apoteker. Kegiatan pelayanan di apotek telah berkembang menjadi layanan komprehensif untuk meningkatkan kualitas hidup pasien atau pharmaceutical care. Konsep pharmaceutical care berkaitan dengan konsep dasar Good Pharmacy Practice (GPP). Good Pharmacy Practice atau GPP merupakan panduan internasional mengenai praktik kefarmasian yang dibuat oleh International Pharmaceutical Federation (FIP) yang berkolaborasi dengan World Health Organization. Menurut panduan GPP, apoteker harus memastikan bahwa kondisi penyimpanan yang disediakan telah tepat untuk semua obat terutama obat yang perlu pengawasan khusus. Tujuan laporan PKPA ini adalah untuk menganalisis implementasi aspek penyimpanan di KFA No. 382 yang disesuaikan pada panduan Good Pharmacy Practice (GPP). Analisis didasarkan dari observasi dan implementasi panduan GPP mengenai aspek penyimpanan sediaan obat di Apotek Kimia Farma No. 382. Berdasarkan hasil analisis, prosedur penyimpanan sudah hampir sepenuhnya menerapkan panduan Good Pharmacy Practice (GPP) yaitu sebanyak 95,65% atau 22 variabel sesuai dengan poin-poin yang diatur dalam panduan GPP. Namun, masih terdapat satu variabel (4,35%) yang belum sesuai dengan panduan GPP.

.....The pharmacy is one of the pharmaceutical service structures where pharmaceutical practices are carried out by pharmacists. Service activities in pharmacies have turned into comprehensive services to improve patient's quality of life (pharmaceutical care). The concept of pharmaceutical care is linked to the basic concept of good pharmacy practice (GPP). Good pharmacy practice (GPP) is an international guide to pharmaceutical practice created by the Federation of International Pharmaceuticals (FIP) in collaboration with the World Health Organization. According to GPP guidelines, pharmacists must ensure that the storage conditions provided are appropriate for all medicines, especially those that require special supervision. The purpose of this PKPA report is to analyze the implementation of archiving aspects in KFA No. 382 adapted to the guidelines of good pharmacy practice (GPP). The analysis is based on the observation and implementation of the GPP guidelines relating to aspects of the conservation of medicines at the Kimia Farma pharmacy No. 382. Based on the results of the analysis, the storage procedure almost fully implemented the guidelines of good pharmacy practice (GPP), i.e., 95.65% or 22 variables according to the points set out in the GPP guidelines. However, there is still one variable (4.35%) that does not comply with GPP guidelines.
