Abstrak

COVID-19 merupakan penyakit pernapasan yang mewabah di seluruh dunia setelah kasus pertama di Wuhan, Republik Rakyat Tiongkok, ditemukan pada Desember 2019, dan memasuki Indonesia pada tahun 2020, yang mengakibatkan terjadinya masa pandemi. Pada masa pasca-pandemi tersebut, diduga terdapat hubungan antara determinan lingkungan hunian baik dari kondisi lingkungan dan kondisi status ekonomi memiliki hubungan dengan pengetahuan, sikap, dan perilaku pencegahan COVID-19. Penelitian berikut menggunakan desain penelitian cross-sectional dan simple random sampling. Dari penelitian berikut, dapat dilihat bahwa terdapat hubungan bermakna antara determinan lingkungan hunian terhadap pengetahuan, sikap, dan perilaku pencegahan COVID-19, dan dapat diketahui lingkungan hunian memiliki hubungan lebih kuat terhadap pengetahuan seseorang terhadap COVID-19.

.....COVID-19 is a respiratory illness that plagued the world after first case found on Wuhan, People's Republic of China, in December 2019, and entered Indonesia on 2020 that caused pandemic era in Indonesia. On post-pandemic era, it is suspected there are relationship between household condition determinants from the environment and economic status to knowledge, perception and attitudes towards COVID-19. The research used cross-sectional study design and simple random sampling. From this research, it could be seen that there is a significant relationship between household condition and knowledge, perception and attitudes towards COVID-19. It is also known that household condition has stronger relationship with someone's knowledge towards COVID-19.
