## Abstrak

Pedagang Besar Farmasi (PBF) adalah perusahaan berbentuk badan hukum yang memiliki izin untuk pengadaan, penyimpanan, penyaluran obat dan/atau bahan obat dalam jumlah besar sesuai ketentuan peraturan perundang-undangan. Karena PBF merupakan salah satu dari mata rantau alur distribusi, dalam menyelenggarakan pengadaan, penyimpanan, dan penyaluran obat dan/atau bahan obat, PBF wajib menerapkan Pedoman Teknis Cara Distribusi Obat yang Baik (CDOB). Cara Distribusi Obat yang Baik (CDOB) adalah cara distribusi atau penyaluran obat dan/atau bahan obat yang bertujuan untuk memastikan mutu sepanjang jalur distribusi sesuai persyaratan dan tujuan penggunaannya. Perlu adanya pemahaman tentang peran apoteker di PBF sehingga dapat meningkatkan fungsi dan peran apoteker dalam mengendalikan dan mengawasi distribusi obat dan alat kesehatan. Pelaksanaan evaluasi alur penerimaan produk rantai dingin dan narkotika dilakukan dengan membandingkan SOP dan aktual di lapangan serta CDOB. Analisis dilakukan dengan membandingkan kesesuaian SOP dan alur penerimaan aktual di lapangan untuk produk rantai dingin dan narkotika KFTD Cabang Bogor dengan CDOB (Cara Distribusi Obat yang Baik) serta melakukan evaluasi terhadap SOP penerimaan serta alur penerimaan aktual di lapangan untuk produk rantai dingin dan narkotika berdasarkan ketentuan CDOB. Berdasarkan hasil pengamatan alur penerimaan CCP atau narkotika di KFTD cabang Bogor, baik Standar Operasional Prosedur Kimia Farma Trading and Distribution serta kegiatan penerimaannya di lapangan telah sesuai dengan Pedoman Cara Distribusi Obat yang Baik.

..... Pharmaceutical Supplier (PBF) are companies in the form of legal entities that have permits to procure, store, distribute drugs and/or medicinal ingredients in large quantities in accordance with statutory provisions. Because PBF is one of the distribution flow links, in organizing the procurement, storage and distribution of drugs and/or medicinal ingredients, PBF is obliged to implement the Technical Guidelines for Good Drug Distribution Methods (CDOB). Good Medicine Distribution Method (CDOB) is a method of distributing or distributing medicines and/or medicinal substances which aims to ensure quality along the distribution route according to the requirements and intended use. There needs to be an understanding of the role of pharmacists in PBF so that they can improve the function and role of pharmacists in controlling and supervising the distribution of medicines and medical devices. Evaluation of the flow of receipt of cold chain products and narcotics is carried out by comparing SOPs and actuals in the field and CDOB. The analysis was carried out by comparing the suitability of the SOP and actual receipt flow in the field for cold chain and narcotic products of KFTD Bogor Branch with CDOB (Good Medicine Distribution Method) as well as evaluating the receipt SOP and actual receipt flow in the field for cold chain and narcotic products based on the provisions CDOB. Based on the results of observations of the flow of CCP or narcotics receipts

at KFTD Bogor branch, both Kimia Farma Trading and Distribution Standard Operational Procedures as well as receipt activities in the field are in accordance with the Guidelines for Good Drug Distribution Methods.
