Abstrak

Pada pelaksanaan beberapa pelayanan di Puskesmas Kecamatan Ciracas, kegiatan penyerahan obat yang merupakan salah satu pelayanan kefarmasian juga dilakukan dengan bantuan dari tenaga kesehatan non farmasi. Meskipun begitu, demi memberikan pelayanan kefarmasian yang sesuai dengan standar yang berlaku, serta untuk meningkatkan pengetahuan dan keterampilan bagi tenaga kesehatan non farmasi yang melaksanakan pelayanan kefarmasian tersebut, maka perlu dilakukan Sosialisasi Pelayanan Kefarmasian. Oleh karena itu, tugas khusus ini bertujuan untuk memastikan terlaksananya kegiatan dan mengetahui capaian pengetahuan dari peserta kegiatan sosialisasi pelayanan kefarmasian kepada tenaga medis lain yang didelegasikan. Tugas khusus ini disusun dengan mengumpulkan dokumen dari kegiatan sosialisasi pelayanan kefarmasian yang telah dilakukan sejak tahun 2017 hingga tahun 2022, kemudian diperiksa kelengkapan dan bukti pelaksanaan kegiatan. Setelahnya, dilakukan perekapan pada nilai post test yang telah dikerjakan oleh peserta sebagai parameter keberhasilan penyampaian sosialisasi pelayanan kefarmasian apakah telah dipahami atau tidak. Sosialisasi pelayanan kefarmasian di Puskesmas Kecamatan Ciracas sudah berjalan dengan baik setiap tahunnya dari 2017 sampai 2022. Rata-rata persentase peserta yang terdiri atas Dokter gigi, Bidan, dan Perawat, untuk lulus sebesar 98,75% dalam lima tahun (2017, 2018, 2019, 2021, dan 2022) dan telah memahami materi terkait pelayanan kefarmasian serta didelegasikan sebagai tenaga kesehatan non farmasi yang dapat melaksanakan pelayanan kefarmasian.

..... In the implementation of several services at the Ciracas District Health Center, drug delivery activities, which are one of the pharmaceutical services, are also carried out with the assistance of non-pharmaceutical health workers. However, in order to provide pharmaceutical services that comply with applicable standards, as well as to increase the knowledge and skills of non-pharmaceutical health workers who carry out these pharmaceutical services, it is necessary to carry out Socialization of Pharmaceutical Services. Therefore, this special task aims to ensure the implementation of activities and determine the knowledge achievements of participants in socialization activities on pharmaceutical services to other delegated medical personnel. This special task was prepared by collecting documents from socialization activities for pharmaceutical services that had been carried out from 2017 to 2022, then checking for completeness and proof of implementation of the activities. Afterwards, a recap of the post test scores that had been completed by the participants was carried out as a parameter for the success of delivering socialization on pharmaceutical services, whether they had been understood or not. Socialization of pharmaceutical services at the Ciracas District Health Center has been going well every year from 2017 to 2022. The average percentage of participants consisting of dentists, midwives and nurses to graduate is 98.75% in five years and have understood the material related to pharmaceutical services and have been delegated as non-pharmaceutical health workers who can

carry out pharmaceutical services.
