Abstrak

Pengalaman negatif remaja dapat membentuk konsep diri negatif salah satunya adalah pengalaman pelecehan seksual online. Penelitian ini bertujuan untuk mengidentifikasi hubungan pengalaman pelecehan seksual online terhadap konsep diri remaja putri. Penelitian cross sectional ini melibatkan sejumlah 427 sampel remaja putri yang diseleksi dengan quota sampling. Kuesioner menggunakan Cyber-Sexual Experiences Questionnaire versi Bahasa Indonesia untuk pengalaman pelecehan seksual online dan Adolescents' Self-Concept Short Scale versi Bahasa Indonesia untuk menilai konsep diri. Penelitian ini menunjukkan sebagian besar remaja putri yang pernah mengalami pelecehan seksual online sebanyak 76,3% dan sebanyak 47,8% memiliki konsep diri yang rendah. Hasil penelitian menunjukkan terdapat hubungan antara pengalaman pelecehan seksual online terhadap konsep diri remaja putri melalui hasil analisis uji Chi Square didapatkan p-value 0,001. Hasil penelitian ini merekomendasikan perlunya rehabilitasi dan konseling kepada remaja yang mengalami dampak sosial akibat pengalaman seksual online.

.....Negative experiences, including cyber sexual harassment, can lead to a negative self-concept toward adolescents. This research aims to identify the correlation between cyber sexual harassment experiences and the self-concept of female adolescents. This quantitative research uses a correlational descriptive design and a cross-sectional approach involving 427 samples of female adolescents determined using quota sampling. This research uses the Cyber-Sexual Experiences Questionnaire Indonesian version to examine cyber sexual harassment experiences and the Adolescents' Self-Concept Short Scale Indonesian version to assess self-concept. This research shows that the majority of female adolescents who have experienced online sexual harassment are 76.3% and as many as 47.8% of female adolescents have a low self-concept. The research results show that there is a correlation between cyber sexual harassment experiences and the self-concept of young women, as can be seen from the results of the Chi-Square test analysis, i.e., the p-value was 0.001. The results of this study recommend the need for rehabilitation and counseling for female adolescents who experience social impacts due to cyber sexual harassment experiences.
