Abstrak

Penelitian ini memiliki tujuan untuk mengetahui peran psychological capital (PsyCap) dalam memediasi hubungan antara perceived social support dan subjective well-being pada istri yang bekerja. Penelitian ini penting karena belum ada pemahaman yang jelas terkait dengan bagaimana perceived social support dapat berperan pada subjective well-being istri yang bekerja. Pada penelitian ini, subjective well-being diukur dengan Satisfaction with Life Scale dan Scale of Positive Affect and Negative Experience, perceived social support diukur menggunakan Multidimensional Scale of Perceived Social Support, dan psychological capital diukur dengan PCQ-12. Penelitian ini dilakukan pada 117 istri yang bekerja. Hasil penelitian menemukan bahwa psychological capital memediasi hubungan antara perceived social support dan subjective well-being. Hasil dari penelitian ini dapat bermanfaat untuk memperkaya literatur terkait variabel perceived social support, psychological capital, dan subjective well-being.

.....This study aimed to examine the role of psychological capital (PsyCap) in mediating the relationship between perceived social support and subjective well-being of working wives. This study is important because there is yet a clear understanding on how perceived social support can contribute to subjective well-being of working wives. In this study, subjective well-being was measured by Satisfaction with Life Scale and Scale of Positive Affect and Negative Experience, perceived social support was measured using Multidimensional Scale of Perceived Social Support, and psychological capital was measured by PCQ-12. This study was conducted on 117 working wives. The results found that psychological capital mediates the relationship between perceived social support and subjective well-being. The results of this study can be useful for enriching the literature related to the variables of perceived social support, psychological capital, and subjective well-being.
