

Strategi Keamanan Nasional dalam Kerjasama Indonesia dan Uni Emirat Arab Bidang Pertahanan dengan Pendekatan Analisis Delphi = The National Security in Cooperation between Indonesia and the United Arab Emirates in the Defense Sector with Delphi Methode Approach

Mufida Inas Aulia, author

Deskripsi Lengkap: <https://lib.ui.ac.id/detail?id=9999920551400&lokasi=lokal>

Abstrak

Perkembangan tren global menjadikan isu keamanan nasional sebagai poros kepentingan di setiap negara. Keamanan nasional bukan saja berkaitan dengan ancaman militer, namun mencakup berbagai aspek seperti ekonomi, politik, sosial, dan budaya. Indonesia dan Persatuan Emirat Arab (UEA) merupakan dua negara yang telah memiliki hubungan erat dengan melakukan kerjasama di berbagai bidang, salah satunya adalah di bidang pertahanan. Berdasarkan teori sekuritisasi Buzan, konflik identitas, hegemoni kawasan, dan ancaman terorisme termasuk ke dalam ancaman terhadap komponen dari keamanan nasional, yakni the idea of the state, the physical base of the state, dan the institutional expression of the state. Melalui analisis Delphi, penulis mendapati bahwa terdapat 16 variabel yang berpengaruh terhadap keamanan nasional. Maka, perubahan status kerjasama industri pertahanan yang semula Business-to-Business (B2B) menjadi Government-to-Government (G2G) hadir sebagai isu yang menarik untuk dianalisa faktor dan dampaknya.The development of global trends has made national security issues the axis of interest in every country. National security is not only related to military threats, but includes various aspect such as economics, political, and cultural. Indonesia and the United Arab Emirates (UEA) are two countries that have close relations by collaborating in various fields, one of which is in the defense sector. Based on Buzan's securitization theory, identity conflict, regional hegemony, and threat of terrorism are included as threats to the components of national security, namely the idea of the state, the physical basis of the state, and the institutional expression of the state. Through a Delphi Method, the author finds out 16 variables that affect national security which will then provide conclusions on the impact of national security strategy policies that focus on defense industry agreements is the aim of this scientific work. So the change in the status of defense industry cooperation from Bussiness-to-bussiness (B2B) to Government-to-Government (G2G) appears as an interesting issue to analyse the factors and impacts.
