Abstrak

Penelitian ini bertujuan untuk menemukan hubungan antara pertemanan daring dengan kesepian dan psychological well-being pada emerging adulthood Indonesia serta menemukan peran moderasi pertemanan daring dalam hubungan antara kesepian dan psychological well-being pada emerging adulthood Indonesia. Partisipan penelitian ini adalah emerging adulthood Indonesia yang telah berteman selama minimal enam bulan lamanya. Jumlah partisipan penelitian ini adalah 605 orang dan penelitian ini dianalisis menggunakan Pearson Correlation dan PROCESS Hayes. Diketahui pertemanan daring belum cukup signifikan dalam memperkuat korelasi antara kesepian dan psychological well-being [$B=0,0019$; $t(599)=0,5946$; $CI[-0,0045; 0,0083]$; $p > 0,05$], tetapi penelitian ini membuka kesempatan untuk dapat melakukan penelitian lanjutan yang dapat memperkaya pengetahuan tentang dinamika pertemanan daring pada emerging adulthood Indonesia.

..... This research is intended to find out the relation between online friendship with loneliness and psychological well-being on Indonesian's emerging adulthood, plus finding out the moderating role of online friendship in the relationship between loneliness and psychological well-being on Indonesian's emerging adulthood. The participants of this research are Indonesian's emerging adulthood which have been befriending with their online friends for six months in minimum. Total of participants on this research are 605 people and this research is analyzed using Pearson Correlation and PROCESS Hayes. It's found that online friendship hasn't yet significantly strengthen the correlation between loneliness and psychological well-being [$B=0,0019$; $t(599)=0,5946$; $CI[-0,0045; 0,0083]$; $p > 0,05$], but this research opens the chance to do more researches about the dynamics of online friendships on Indonesian's emerging adulthood.
