### Abstrak

[<b>ABSTRAK</b><br>

Salah satu strategi untuk menurunkan Angka Kematian Ibu dan Angka Kematian Bayi di Indonesia adalah pelaksanaan operasi sectio caesarea. Tetapi hal ini akan menimbulkan masalah tersendiri khususnya pada perawatan periode post partum. Ibu tersebut harus bisa dan mau merawat dirinya untuk menjaga kesehatannya dan kesehatan bayinya. Penelitian ini bertujuan untuk mengidentifikasi faktor-faktor apa yang mempengaruhi motivasi perawatan diri pada ibu post sectio caesarea. Penelitian menggunakan pendekatan cross sectional design, pada 66 responden, instrumen penelitian berupa kuesioner dan lembar observasi yang telah diukur validitas, reliabilitasnya. Hasil penelitian menunjukkan bahwa pendidikan, pekerjaan, minat dan media/informasi merupakan faktor yang berpengaruh terhadap motivasi perawatan diri ibu post sectio caesarea dan pendidikan merupakan faktor yang paling berpengaruh. Oleh karena itu disarankan pendidikan kesehatan oleh petugas kesehatan pada ibu yang akan dilakukan sectio caesarea perlu diberikan untuk menjaga kesehatan ibu dan bayinya;
