**ABSTRAK
**

Penelitian ini membuktikan pernyataan Dodd dan Favaro 2006 bahwa hasil batting average yang lebih bervariasi dalam industri dibandingkan antar industri. Batting average yang menjadi pengukuran kemampuan perusahaan mengelola three tensions dianalisis pada perusahaan LQ45 dan dibandingkan satu sama lain berdasarkan industri dan pergantian chief executive officer dan dihubungkan dengan total shareholder return. Dari hasil penelitian yang dilakukan, penelitian ini menunjukkan hasil yang searah dengan pernyataan Dodd dan Favaro 2006 bahwa hasil batting average lebih bervariasi dalam industri dibandingkan antar industri, namun tidak memiliki hubungan dengan total shareholder return. Penelitian ini juga menunjukkan perbedaan hasil batting average pada pergantian chief executive officer, yang menunjukkan bahwa variasi batting average yang lebih besar dalam industri disebabkan oleh perbedaan strategi masing-masing perusahaan.

**ABSTRACT
**

This study proves Dodd and Favaro 2006 statement that the batting average results are more varied within the industry than between industries. Batting averages which indicate the company 39 s ability to manage the three tensions is analyzed at the LQ45 company and compared with each other based on the industry, chief executive officer turnover, and total shareholder return. Based on result on the research conducted, this study shows that the results in line with Dodd and Favaro 2006 statement that the results of the batting average is more varied in the industry than between industries, but in contrast do not have a relationship with TSR. This study also shows differences in the results of the batting average on chief executive officer turnover, which indicates that the variation batting average greater in the industry due to the differences in each company 39 s strategy.
