Abstrak

Perilaku hidup bersih dan sehat PHBS merupakan kunci utama dalam meningkatkan derajat kesehatan masyarakat termasuk anak usia sekolah dasar 6-12 tahun . Namun hingga saat ini angka pencapaian PHBS masih rendah sehingga membutuhkan perhatian yang serius dari tenaga kesehatan.

Tujuan dari penulisan ini adalah memberikan gambaran implementasi Collaboration, Health Education, Skill, Supportive Environment COHESIVE melalui asuhan keperawatan keluarga dan komunitas dalam meningkatkan PHBS siswa SD di Kelurahan Curug Kecamatan Cimanggis Kota Depok. Metode yang digunakan yaitu evidence based practice.

Hasil menunjukkan bahwa terjadi peningkatan pengetahuan, sikap, dan keterampilan PHBS baik di keluarga maupun di tatanan sekolah setelah diberikan intervensi COHESIVE. Dengan demikian maka intervensi COHESIVE dapat diaplikasikan sebagai salah satu bentuk layanan kesehatan yang diberikan oleh petugas kesehatan untuk meningkatkan PHBS di keluarga maupun sekolah.

Healthy behavior is a key element in improving community health status including elementary school children 6 12 years old. But until now the achievement of healthy behavior is still low so it requires serious attention from health personnel.

The purpose of this paper was to provide an overview of the implementation of Collaboration, Health Education, Skill, Supportive Environment COHESIVE through family and community nursing care in improving healthy behavior among elementary school children in Depok City. The method used was evidence based practice.

The results showed that there was an increase knowledge, attitudes, and healthy life skills both in the family and in the school setting after COHESIVE interventions. COHESIVE interventions can be applied as one of health services provided by health personnel to improve healthy behavior in families and school setting.
